

## Proven Functionality and Desirable Aesthetics Make Rockfon® the Preferred Choice

Building on 50 years of success in Europe, Rockfon stone wool ceiling products have been available in North America since 2013. Now, these high-quality, high-performance products are being manufactured at our new facility in Mississippi.

"Knowing that Rockfon's complete line of products are made in the U.S., makes it an even easier choice for us," acknowledges Jorge Romero, vice president of Habitec Architecture & Interior Design.

"We have to consider so many variables when choosing quality products. Aesthetics, longevity, functionality, ease of installation, availability, price, environmental impact – the list gets longer every year. When we select Rockfon products, we can count on them to provide the quality and performance we need."

Rockfon stone wool ceiling panels are made to precise, high-quality specifications and standards, providing you with:

- **Acoustic control.** Our products offer superior acoustic control, up to a noise reduction coefficient (NRC) of 0.90 for our most sound-absorbent panels.

"Rockfon's sound-absorbing ceiling panels help provide a more comfortable, productive and less-stressful indoor environment for our customer's latest project," says Eliza Engle, AIA at GBR Architects in Alexandria, Virginia.

"Managing noise allows people to concentrate more easily and creates more privacy for meetings and sensitive conversations."

- **Light reflectance.** Many of Rockfon's stone wool ceiling panels have a white finish that reflects up to 86 percent of available light. This can save energy by requiring less artificial lighting and giving you greater flexibility in your designs.

"The smooth, white, reflective surface of Rockfon ceiling panels allowed us to cut down on the number of lighting fixtures and the frequency of their use, which saves on energy and lets us be more efficient with our resources," explains Engle.

- **Humidity resistance.** Rockfon stone wool ceiling panels are dimensionally stable at up to 100 percent relative humidity. In addition, with no nutritional value, they do not support mold growth, which means healthier indoor air.

"When sourcing materials for our latest project, we had a strong focus on indoor air quality. We needed materials that could withstand high humidity without getting moldy," explains Romero. "Rockfon stone wool ceiling panels not only checked the IAQ box, they had the added advantage of being able to install before the building was weathertight without the risk of degraded performance."

# Reliable Quality and Performance from Rockfon

- **Ease of use.** Ceiling panels are cut to order at the factory and designed to work seamlessly with our suspension systems. Once installed, they provide easy access to the plenum.

“As technology and tenant use changes, Rockfon ceiling systems make it easy to remove a small group of panels to update lighting, security cameras or cables in the plenum,” says Jason Landry, corporate secretary of Landry & Sons Acoustics, Inc.

“With other systems, it can be a huge headache to take out an entire row of panels before getting to the necessary area, and inevitably, you damage some of the panels in the process. Rockfon’s panels are durable and accessible, requiring very little maintenance to keep them looking good.”

Landry adds, “Getting at the plenum more quickly minimizes downtime to the building occupants. Our increased efficiency in being able to get in and out of their space with minimal disruption allows them to be more productive, too.”

## Additional Benefits

- **Fire resistance.** Stone wool is noncombustible. All Rockfon stone wool products are UL/ULC certified for flame spread and smoke development, contributing to a safer environment.
- **Aesthetic value.** In addition to the smooth, white color that many prefer, our panels are available in a variety of colors to accentuate creative interior design schemes.
- **Thirty-year warranty.** Rockfon stone wool ceiling panels are backed with a 30-year warranty and supported by an experienced team of technical and customer service professionals.

Rockfon ceiling panels provide the creative flexibility, peace of mind and long-lasting, quality performance. Our complete ceiling systems contribute to safe, healthy, sustainable, comfortable and beautiful buildings that enrich modern life.

Rockfon is part of the ROCKWOOL Group and is offering advanced acoustic ceilings and wall solutions to create beautiful, comfortable spaces.

At the ROCKWOOL Group, we are committed to enriching the lives of everyone who comes into contact with our solutions. Our expertise is perfectly suited to tackle many of today's biggest sustainability and development challenges, from energy consumption and noise pollution to fire resilience, water scarcity and flooding. Our range of products reflects the diversity of the world's needs, while supporting our stakeholders in reducing their own carbon footprint.

Stone wool is a versatile material and forms the basis of all our businesses. With approximately 10,500 passionate colleagues in 38 countries, we are the world leader in stone wool solutions, from building insulation to acoustic ceilings, external cladding systems to horticultural solutions, engineered fibers for industrial use to insulation for the process industry, and marine and offshore.
